[CAUTION: Non-UBC Email]

Hi A&L,

I agree with the ones provided by Alana and I gave a suggestion to number one (though it is more of a changing the sentence overall because I don't think what the reviewer said was at all accurate). Hope this helps but happy to go over it if you are not happy with it.

Thanks alana for re-sending the version of GSL figure. I see the confusion they had because of the formatting issues but I think with the new one (and clarifying what NSC stands for), people would be on board). What do you think Lizzie?

(I will have a look at the other figure later on today, I will reply on a separate 🙄)

Best,
R

Attaching pdf with citations for 2 of the 3, but I don't know if one is right. Maybe cut the sentence?

Ruben's more updated figure (attached) didn't have the floating black bar of my weird version, I think then it would have made more sense to people. It makes it easier to explain the brach thing which is more complicated and species specific. Should I try a caption for this version?

A

Hi Alana and Rubén,

I was wondering if you can help me with:

(1) Place in the text that needs cites (it says NeedCITES and suggCITES)
-- and make sure what we say is vaguely accurate?

(2) Finalized GSL figure. It seems like the preference is for the GSL figure on the left side (see attached combined comments) so could we come up with one we like and make sure the caption is okay? I can also work up the caption with text from Ailene and send to you for final tweaking.

If you don't have time for (1) I can definitely ping it back to Janneke or Kavya who offered to help but did not have immediate ideas. (I have already loaded up Cat and Ailene with tasks, and just honestly don't feel that I have the time to chase down Fredi but could if you think he would help.)

All the best,
L
